## **DETAILED ACTION**

### ***Election/Restriction***

1. Claim 9 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention, the requirement having been traversed in Paper No. 6.

Applicant's arguments are not persuasive. Claim 9 is drawn to a method of generating gas whereas claim 1 is drawn to a composition. This composition could also be used as an igniter.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nielson et al(6,224,099).

Nielson et al discloses a gas generating composition that comprises guanidine nitrate and ammonium perchlorate. The composition also includes sodium carbonate. Other ingredients are included such as binders, burn rate modifiers, and slag formers. The particular amounts of the fuel and the oxidizer are not disclosed.

Art Unit: 3641

It would have been obvious to one having ordinary skill in the art at the time the invention was made to vary the amounts of the fuel and oxidizer in the composition of Nielson et al so that it effectively works as a gas generant in a supplemental restraint system.

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Knowlton et al(6,235,132 and 5,780,768) and Lundstrom et al(6,093,269).
